GET ON BOARD WITH THE LATEST COMMUNICATION TECHNOLOGY

## Live Tour Bus GPS Tracking with Next Stop ETA

New Technology:
Talk to one, or all drivers with a simple push of a button.
Use Driver RFID Swipe Cards for logging Drivers on & off shift and identify who drove a bus at any date or time.
Gatlinburg Tennessee was our first client. They needed a system that would update & display the location of each tourist trolley bus and the ETA at each stop.
Datalink Systems has been designing AVL and wireless data tracking software since 1996.

PTT

PTT (Push To Talk Mics) using local VHF/UHF mobile radio channels have been around for years but coverage was limited to a few miles and the radios are expensive. **Not suitable for many tour-bus operators.**

PoC (PTT over Cellular) is new, 2019 is when it came in to common use. There are no distance limits. You can talk around the world with a push of the mic button. Talk one to one, or one to groups and multiple bus routes.

Datalink offers two choices of PoC Driver Terminals the Ulefone ARMOR 5, which is a high quality, rugged easy to operate cell phone. Legal to operate when used in a cradle with a PTT button, yet still mobile. The other is an Android Tablet mounted in a cradle.

Total Communication Solution with Seasonal Billing
Datalink provides multi-network airtime with automatic switching to the strongest cellular coverage in each area.

Customer Services
- **Automatic e-mail alerts when bus is close to arriving at destination.**
- **Patrons can use their cell phones to log into the Tour Bus website and see a live map of the bus and the current location.**
- **Patrons can be notified of any delay of service.**
