Datalink introduces the Piccolo Plus

To all Kenwood Dealers,

Cellular no longer needs to be a dirty word in the LMR community.

As data processing becomes more prevalent over NEXEDGE networks, interference with voice calls becomes a problem and already well acknowledged. Datalink can arrange a simple low cost M2M cellular data service from WYLESS.com. This does not involve phone contracts with any of the major carriers and is the perfect solution to voice call interference.

Datalink is pleased to announce we have now partnered with Wireless Links Inc. to offer the Wlius range of GSM wireless devices. DataNET when coupled with NX radios can offer your client the ability to free up the radio channel for voice using GSM for data only.

The Piccolo Plus offers a wide range of "add on" options to Datalink's DataNET host software platform giving your clients the ability to monitor important options at an affordable price.

Options include:
- OBD engine computer interface (J1708, CAN Bus, OBD-II & J1939)
- Event logs (engine on/off, vibration alarm, door open/close)
- RFID (passive & active). Example: Garbage bin pick up reporting.
- Bluetooth
- WiFi
- Temperature Sensors
- Driver ID
- Starter immobilizer
- IO's
- Analog input
- Bad Driver behavior
- Garmin FMI interface
- Flexible RS-232
- Battery saving mode
- Accident detection
- Panic button

Datalink staff will be at the Kenwood Solutions Developer Open House at IWCE again this year.

Please contact us to see how DataNET and the Piccolo range or any of other products can assist your clients in personnel or asset tracking as well as our line of SCADA management products.
